

Security Intelligence Report

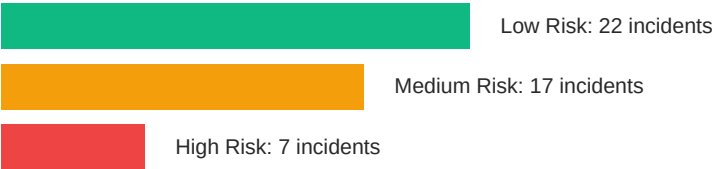

Period: June 2026 | Prepared by ShopGuard AI System

EXECUTIVE SUMMARY

The ShopGuard AI surveillance system has processed 46 video submissions during this reporting period. The CNN-BiLSTM model (MobileNetV2 backbone, trained on UCF-Crime) identified 16 suspicious events, representing a 34.8% threat rate. Average model confidence across all analyses was 71.8%. The composite security score stands at 83/100, indicating a secure environment.

RECOMMENDATIONS

Immediate Action

Review all High-risk flagged footage with security personnel within 24 hours.

Process Improvement

Install additional cameras at blind spots identified in repeated suspicious zones.

Model Enhancement

Expand the training dataset with local footage for improved Cameroonian context accuracy.

Reporting Cadence

Generate weekly reports and share with store management and security supervisors.

Hardware Upgrade

Consider edge inference hardware for real-time per-frame processing capability.

This report was automatically generated by ShopGuard AI. Results should be reviewed by a qualified security professional. The model achieves 83.33% recall on the UCF-Crime benchmark and is designed for deployment on standard hardware without GPU requirements.
